

Quick Guide

Contact search text field:

- You can search for the contact by entering anything like Fname, Mname, Lname, Address, Phone etc or a combination of all. You don't need to enter the keywords such as and, or, in etc.
- When you click search then a new page will open. Table will be populated with all the search results that matches the criteria displaying Full Name and option to delete or modify the contacts.
- In the modify page, you have all the information related to the person such as phone, address and dates.

Adding a New Contact

- You can add a new contact by clicking on add contact.
- Enter all the relevant information and select the type of contact you want to save by a combination of options from Address Type, Phone Type or Date Type.

Deleting Contact's Record

- You can delete a person's record by clicking on delete icon. An alert is thrown before deleting asking for user's permission.
- You can view a person's complete profile by clicking on modify option in search page or by navigating to localhost/DBproject1/delete.php?id="CONTACT_ID"
- By specifying the contact id all the details will be shown.

Updating a record

- You can update the record by clicking on edit sign in the view all page. All the relevant field can be updated for a particular record.

View All Records

- This displays all the information of a contact such as
Contact Info: First, Middle, and Last name

Address Info:

- Type of address (e.g. home, work, other, etc.)
